

As your storage and handling needs evolve, this range of containers can adapt with you. The standard container can become a stack and nest container with or without the protective tamper-proof lid.

- Made from polypropylene.
- When nested empty, these containers save up to 75% of their volume.
- Smooth inner walls ensure a 100% utilisation of the volume and easy cleaning.
- Comfortable handling due to generously spaced and ergonomically designed handgrips.
- The flat and textured base and rounded corners ensure optimum travel characteristics for conveyors and live storage systems.
- Optionally available with hinged, interlocking lid with its integrated recessed area makes for a high stacking stability. The lid can be securely sealed and is safely attached to the container.
- The hinged lid version suited for automated long and short side strap-sealing has high edges to guarantee maximum stacking during transport. Add-on fork entry shoes are available. MB containers with ribbed base can be retro-fitted with fork entry shoes whenever required. Double base MBs must either be ordered complete with fork entry shoes or the order must indicate that fork entry shoes will be mounted at a later date.
- The customer's logo can be applied onto the container by injection moulding, tampon print, screen print or hot stamping. Large areas for logo printing and label holders on all four sides.
- Conductive version upon request.

Company logos and slogans can be applied by injection moulding, tampon print, screen print or hot stamping. Containers are available in any colour. Lids can be different colour to containers. Small minimum quantities apply - contact us for details.

The strapping lid closes and secures individual containers as well as stacks. It has been developed for automatic long and short side strap-sealing. High edges guarantee a maximum stacking stability during transport.

Indented buffers prevent same height containers from overriding on conveyors in case of jams.

Fast, simple and thorough cleaning is possible due to smooth surfaces and drainage holes in the container rim.

STANDARD MB PLASTIC CONTAINERS

REF	Ext dim (L x W x H) mm	Load capacity kg	Vol ltrs	PRICE
