## HEAVY DUTY LONGSPAN SHELVING

Longspan is a heavy duty shelving system, that consists of graphite coloured uprights and grey beams. It is traditionally used to store large bulky items or longer items that are difficult to place in storage elsewhere but is also suitable for boxes, crates, loose items and much more. You can create runs of shelving to suit your operation by using starter and extension bays as required to your overall lengths of run. The shelves aren't supplied as part of the system as we allow you to choose the right shelves to match your needs: chipboard, MFC or galvanised steel panel - contact us for prices.

- Quick and safe assembly - simply tap together uprights and beams with a mallet.
- Easy to adjust beam heights and simple to dismantle and re-erect.
- Unrestricted shelf levels allow easy access to goods.
- Bays come in either 1800mm or 2100mm high and are supplied with 3 pairs of beams to form the three shelf levels.
- Starter bays have 2 upright frames, 3 pairs of beams and locking clips, extension bays are the same but with 1 upright frame.
- Starter bays can be built as standalone bays.
- Bolt free construction.
- Can store up to 780kg per shelf level.
- Safety - it is essential that shelving exceeding a height to depth ratio of 4:1 to the top loaded shelf is adequately secured to the floor. Bays ACT/18421C, ACT/21421C and ACT/24421C are supplied with floor fixings.
