

AHECS5

CHEMICAL STORAGE UNITS

These storage units are ideal for indoor or outdoor storage and for controlled access to chemicals and liquids such as paints, lubricants, solvents etc. Manage your stock, control who has access and still ensure liquids are correctly stored to minimise leaks, spills and pollution incidents. This range of 3 units are ideal as they are robust, have fully seam welded sumps that comply with the 25% of the total of the containers stored rule and are fitted with locks as standard.

AHECS3

AHECS4

- All units have galvanised removable grid decks above the sump area, which in turn is raised on either fork hoops or base plinths dependent on the model, to eliminate contact with the ground.
- High and low level vents with flame arrester protection are fitted as standard to provide natural ventilation.
- Construction of all 3 models uses robust steel frames with 2mm steel panels welded on, to give additional strength. Doors are either hinged or sliding dependent on the model. Base construction in 3mm sheet size with RHS cross members and frame.
- Please contact us for prices.

REF	25 ltr cans	Description	L x W x H mm	Sump cap ltr	Tare weight kg	PRICE
AHECS3	80 + 5ltr shelf	Twin sliding doors, 3 shelves + grid mesh	2706 x 1410 x 2350	1125	1048	POA
