

WALK-IN CHEMICAL STORAGE UNITS

Our walk-in stores are engineered and designed to let you safely store hazardous chemicals and liquids whilst also giving you the opportunity to 'work' with the containers and liquids knowing that any spillages will be safely contained in the fully welded sump which has a removable galvanised grid mesh deck.

- Each unit is fitted with industrial racking as standard and has high and low level vents with flame arresters to provide protected natural ventilation.
- Construction is based on a rolled hollow section frame with steel panels welded to it for strength and durability, from 2mm and 3mm steel sheet.
- The hinged access door on each model is fitted with a 'cam-lock gear' system like those found on shipping containers, which when fitted with the appropriate padlock (not supplied) helps ensure excellent security.
- If staff are to work in a unit, mechanical ventilation will be required. Please contact us for advice.
- Please contact us for prices.
