

STANDARD DOCKPLATES

Used to bridge the gap and height variation between vehicle and loading bay when loading/unloading. Dockplates are typically used for pallet trucks, sack trucks, roll cages and pedestrian access.

- Dockplates are manufactured from high tensile aluminium.
- All models feature a built-in anti-slip finish.
- Plates are crowned and bevelled for smooth operation.
- Includes loop type handles for easy movement.
- Optional feature of side curbs with castors for easy movement.

TO SELECT CORRECT BOARD

1. Calculate height differential between vehicle floor level and dock level.
2. In accordance with BS EN 1398:2009 the minimum width should be 700mm wider than the track width of the equipment being used, unless restricted by your loading facilities and measures are taken to prevent operator and equipment from falling.
3. Determine max total load. If not covered by plates listed, then refer to dockboards below.
4. Generally plates are for sack or pallet trucks, dockboards are recommended for fork truck use.

REF	Optional features	PRICE
FTH-1AH	Fork truck lifting handles (recomm for all plates over 40kg)	£229.35
SCC-2AH	Side curbs with castor for easy movement	£384.32
FSL-1AH	Fixed span locking legs	£99.18

STANDARD DOCKBOARDS

Used to bridge the gap and height variation between vehicle and loading bay when loading/unloading. Dockboards are typically used with fork lift trucks.

- Dockboards are manufactured to the same high standards as dockplates but with the addition of red painted, steel safety curbs.
- If required dockboards can be manufactured with shortened locking legs to load containers at ground level, thus preventing the board moving forward. Backward movement is prevented by chains and hooks at either side of the ramp which locate in the container locking points.
- Special sizes and models can be made to fit your requirements.

REF	Optional features	PRICE
FTH-1AH	Fork lift handles recommended for boards over 60kg	£229.35/pr
FSL-1AH	Fixed span (please specify span)	£99.18/pr
