

How to design your partitioning.

Starting from a wall, select an upright of the correct height: 2000, 2200 or 2400mm high. This upright is 35mm wide. Then work out the length of panels that are needed until the next wall or to a door (1200mm). Work out any additional panels needed until end point of partitioning run. The run must end with an upright even if it is taking a 90° turn into another run. The total length of panel prices can be worked out from the price grid below. The upright, door or other extras can be added from the accessories grid below. For different sizes or lengths of partitioning and advice on costing your requirements, please contact our sales department.

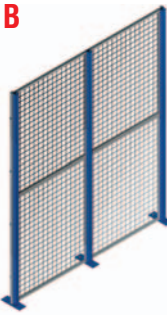

A

UPRIGHT

Starter post - attach panel by 4 clamping collars, 35 x 30mm. 3 heights of mesh panel posts are available - 2000, 2200 and 2400mm.

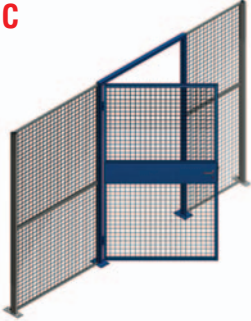

B
